# ACCUMUL8

## Accumul8+ A PERFECT TEN FOR TRANSPORT

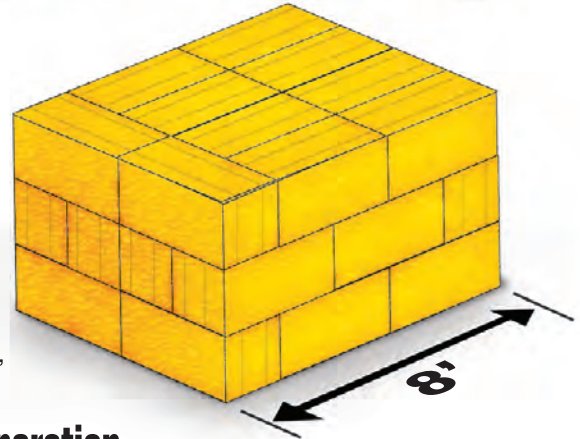

The ten bale model is designed to stack bales ready for road travel.

• **Stable Stack**

Each pack of 10 bales includes 2 bales positioned in the opposite direction. This cross-over pattern strengthens the stack as it builds by tying the bales together.

• **Optimal Width**

Maximizing the width of your highway trailer, the ten bale pack is eight feet wide, making your load efficient and legal width for roadway travel in most areas.

### Mechanical Operation

The Accumul8's mechanical design requires no external hydraulics, PTO or electrical connections. Each bale triggers a series of switches, guiding the next bale into proper location and then releasing the entire pack when full.

### No longer do small bales mean a big job ahead

The Tubeline Accumul8 now gives producers time-savings for one of farming's biggest jobs. The Accumul8 is your solution for handling bales efficiently - saving you time and man power. You can now handle eight, ten or twelve bales at one time. This allows one person to quickly gather and load wagons or highway trailers. Keep your farm operating efficiently with the addition of the Tubeline Accumul8. Contact your authorized Tubeline dealer for details about easier bale handling.

### Easy Towing

Connect the Accumul8 directly behind your baler for instant gathering as you bale or use your truck with the optional hitch adaptor afterwards.

### Floatation Tires

The wide tires provide lower ground pressure, minimizing compaction in soft or wet soil conditions.

### Grabber

For increased efficiency Tubeline's Grabber utilizes large curved tines to pick up bale packs for quick loading into storage and highway trailers. The Grabber is available in a variety of models to

compliment Tubeline's Accumul8 series. Grabbers are also available for other accumulators. For models and configurations, contact Tubeline for more details.
